0.1 project title

prediction of iris.csv data set for decision tree algorithm using supervise learning machine algorithm

0.2 problem statment

A american based botanical garden gow iris flower in their labs but using bio technology in a single tree different type variety flower is grow.

As a data science enginner find out how much accuracy is their all categorie contains same species

[ ]:
```
from sklearn.datasets import load_iris
from sklearn.model_selection import train_test_split
from sklearn.tree import DecisionTreeClassifier
from sklearn.metrics import accuracy_score
```

[ ]:
```
# Load the Iris dataset
iris = load_iris()
X = iris.data
y = iris.target
```

[ ]:
```
# Split the dataset into training and testing sets
X_train, X_test, y_train, y_test = train_test_split(X, y, test_size=0.2,␣
 ↪random_state=42)
```

[ ]:
```
# Create a Decision Tree classifier
decision_tree = DecisionTreeClassifier()
```

[ ]:
```
# Train the classifier on the training data
decision_tree.fit(X_train, y_train)
```

[ ]:
```
DecisionTreeClassifier()
```

[ ]:
```
# Make predictions on the test data
y_pred = decision_tree.predict(X_test)
```

[ ]:
```

```

[ ]:
```
# Calculate accuracy
accuracy = accuracy_score(y_test, y_pred)
print(f"Accuracy: {accuracy:.2f}")
```

```
Accuracy: 1.00
```

0.3 conclusion

According to my decision accuracy will be 1%
